

The Tie Dye Lab

Wash and Care Instructions

Your tie dye creation has been set and rinsed,
all that's left is the washing machine.

A Few Important Notes First!

- **Please wash your item(s) within 2 hours of finishing at the lab.**
- Some of the colors may transfer to other parts of your shirt while it sets in the bag.
This is normal and will come out in the wash.
- We have given you a special mixture of detergent that is meant for the first wash. It is safe for all washers, including HE.

Wash Out Instructions:

1. Add ALL of your Tie Dye Lab special detergent to your wash machine.
Do not use fabric softener for this first wash!
2. Place your item into the washing machine **ALONE**. If you tie dyed with friends or did multiple items you may wash up to three **SIMILAR COLORED** items at a time. For larger items (ie. beach towels and sweatshirts), **PLEASE WASH ONLY ONE AT A TIME!**
3. Use the normal/regular wash setting with **HOT water**. Hot water aids in getting out all the excess dye in the first wash, making it safer to wash your items with other items in the future.
4. Dry **MOST** items on a medium heat setting. We recommend the following items be **LINE DRIED ONLY** to avoid shrinking: Soft Style Shirts, Hooded T-Shirts and Ladies V-Necks.
5. **ENJOY YOUR NEW TIE DYE CREATION!**
6. For future washing maintenance, wash your tie dye with **SIMILAR COLORED** clothing on **COLD**.
